

DEVICE FOR PRODUCING A RIVETED JOINT  
AND CORRESPONDING RIVET

**Abstract of the Disclosure**

A device for producing a riveted joint includes a mechanism (21, 25) to fire a rivet (14) having a jacket (14a) and a pin (14b) guided through the jacket (14a). The rivet is fired through the workpieces to be joined. A means is provided for pulling the rivet (14). The device that can be manufactured at a reasonable price and ensures reliable operation by the mechanism (21, 25) for firing the rivet (14) acting upon the rivet pin (14b).
